INTRODUCTION

SENSEA IS ...

Design for all aspirations

The specialists in our own Design Center developed the design for all the requirements of a premium laminate. With SENSEA they created extraordinary decors, fascinating textures and unique surface experiences. For the uniqueness of our customers, for all lifestyles, for all skylines, for all moods, for all places. Laminate NXT – authentic design for the world you live in.

Technology for all needs

Since our founding in 1949 we have continued to develop new technologies. These today make our family-run company the innovation leader in our industry and holder of numerous patents. With SENSEA you get the best result of our years of experience and research. Laminate NXT – user-friendly, easy to install, resistant and robust in all situations, in all areas – made in Germany.

Sustainability for all living things

We have rethought our production of premium laminate flooring to make the manufacturing process and products even more sustainably. The result: With SENSEA we are introducing our new LEAN CORE technology. This means reducing material, respecting nature and guaranteeing highest quality. Laminate NXT – because less is more for all of us.

Our team for all

Almost 2,000 people make up the CLASSEN team that produces around 100 million square meters of floor and wall coverings per year, delighting people all over the world. In the development of SENSEA we had one common goal: being the best in what we do, for now and for the future of our children and later generations. Laminate NXT by CLASSEN.

DESIGN FOR ALL ASPIRATIONS

Personal living

A floor is an item of furniture. It has to fit you and your life. It must be as authentic and personal as you are. A premium laminate like SENSE quickly becomes a part of you. We at CLASSEN know this from our own experience. That's why our decors are a matter of the heart for us. Every day, our artists in the CLASSEN Design Center work on new feel-good designs. SENSE not only consists of fascinating surfaces that you can see. But also haptic experiences for feet, hands and eyes. The SENSE decors awaken memories, bring back laughter, make you dream. Which design suits your life?

„We know that our customers have valued CLASSEN designs as one of our trademarks for decades. So SENSE was naturally a challenge for us to create special experiences for all the senses and to inspire people anew.“

– Patrick Pohl, Head of Design & Assortment Management

„Sometimes I imagine how a design we have created might look in the clients' rooms. What furniture they find suitable, what personality they might have, what they associate with a colour or a wood finish. There's nothing better than being able to make people's lives more beautiful that way.“

– Nicole Knospe, Teamleader Designcenter

TECHNOLOGY FOR TOMORROW

Easy living

With SENSEA we make life easier for all. The boards contain the new CLASSEN water resistant fold-down installation system for laminate floors: megaloc aqua protect. So SENSEA is easy to install and gives you high-tech-protection for all days in life: 24-hour protection in the event of spilled drinks on sunny days, 24-hour-protection from moisture on rainy days. This unique system provides reliable water resistance by preventing water from entering the joints. In living rooms, bars, offices or restaurants.

Made wet

The NALFA test is a standardised test procedure of the North American Laminate Flooring Association (NALFA). The test measures how laminate flooring behaves when installed with the surface exposed to standing water for 24 hours. The results are excellent: The megaloc aqua protect system from CLASSEN enables protection against edge swelling and ensures a durable floor to enjoy. Daily use, cleaning and splash situations can consequently no longer damage the floor.

„Our team, consisting of the technology and production department at CLASSEN, had worked hard over the last few years, developing ideas, optimising over and over again – and megaloc aqua protect is the excellent result. We at CLASSEN developed the world's first water resistant laminate flooring with a quick installation system.“

– Eberhard Herrmann, Head of Technology and Testing Centre at CLASSEN in Baruth / Mark

Healthy living

With SENSE we make healthy living possible for all. Floors in particular come into contact with many bacteria and can thus be the source of serious illnesses in the home and in public spaces. But the surface of our SENSE laminate boards has a strong antibacterial effect. Our development team at CLASSEN commissioned the independent testing institute of Hohenstein Laboratories to check this special feature. As a result, SENSE laminate received the official „Antibacterial“ certificate according to ISO 22196 (measurement of antibacterial activity on plastic surfaces).

Laboratory tested

For the test, bacteria were placed on the surface of the laminate floorboards and the germ growth was measured over 24 hours. The two frequently occurring bacterial species *Staphylococcus aureus* and *Escherichia coli* (coliform bacteria) were used. According to the ISO 20743 evaluation scheme, the antibacterial effect value must be greater than 2 for a surface to be classified as antibacterial.

CLASSEN laminate flooring achieves a value of > 2.8 for *Staphylococcus aureus* and > 5.9 for *Escherichia coli*.

„The values determined show that the antibacterial effect of our laminate flooring is significantly better than that of many competitor products. We achieve these values without the addition of additives. This clearly proves that we can describe our laminate products as absolutely healthy for the home, not only in terms of pollutant emissions, but also with regard to bacterially transmissible diseases.“

– Yvonne Schumann, Head of the Product Certification Department at CLASSEN in Baruth / Mark

Daily living

„I'm impressed to see how man and machine are constantly evolving, how we manage to always stay on top of the latest technical and technological developments and to keep the plant evolving to stay one step ahead if possible.“

– André Trebuth, Technical Manager at Fiberboard (CLASSEN Group) in Baruth

The „LLT process“ (LLT = Liquid Laminate Technology), invented by CLASSEN, gives Laminate NXT the best properties. This production process combines two previously completely separate steps to one. The result: SENSE has a very high Micro-scratch resistance and a very low rate of gloss change. SENSE therefore is ideally suited for flats with big families or highly frequented rooms such as offices or doctors' surgeries.

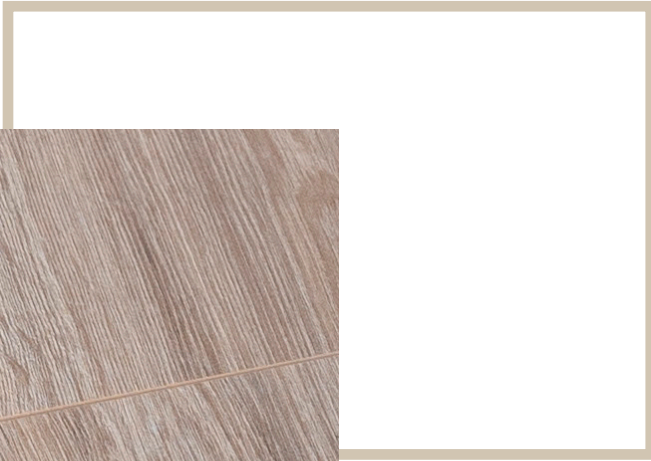

Results of LLT in numbers

Micro-scratch resistance is evaluated in two different procedures according to norm EN 16094:2012. In procedure A, the gloss change is evaluated and in procedure B, the scratch pattern is classified. The rating scale ranges from 1 (gloss change <10% or no scratches) to 5 (gloss change >70% or many scratches, dull abrasion). The LLT process achieves the rating A1 (gloss changes <10%) and B1 (no scratches).

SUSTAINABILITY

RESPECT FOR NATURE

SENSA is an expression of our commitment to protecting the environment. Wood is a renewable resource, yet we must use it responsibly. So we at CLASSEN have a careful selection of wood species respecting the regulations of the forestry management and the most severe European standards on sustainability. All our wood comes from controlled resources only, that is why SENSA is awarded with the labels of FSC (R) (FSC C100583) and PEFC (PEFC/04-31-0824). Furthermore SENSA bears the renowned environmental seal „The Blue Angel“ of the German Federal Government.

Ready for tomorrow

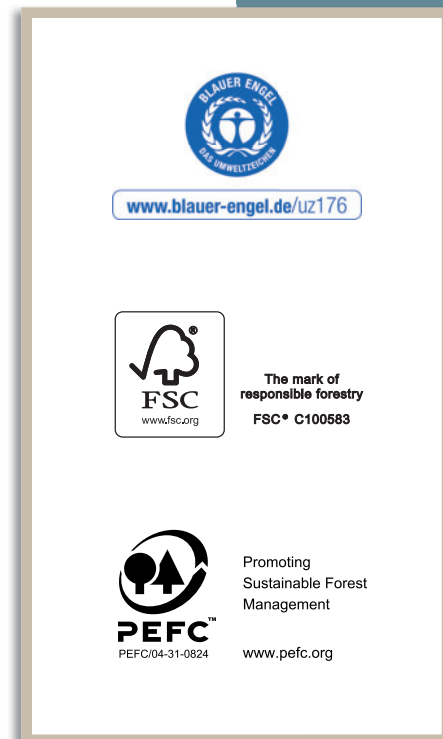

For the production of SENSA in the largest integrated laminate plant in the world we are generating our own energy and we set ourself the goal of soon producing completely CO₂ -neutral.

We have commissioned a new biomass plant at our production site in Baruth / Mark (Brandenburg, Germany) to generate process heat for laminate production. The new plant reduces CO₂ emissions by 7,785 tonnes per year. For comparison: 7,785 tonnes of CO₂ emissions are produced by a passenger aircraft flying from Munich to New York and back two thousand times. All production waste such as chips or broken boards can now be used as fuel in the power plant instead of having to dispose of some of it externally.

The CLASSEN Group has its sustainable energy management certified annually by independent experts. The corresponding certificates confirm that CLASSEN is continuously improving its energy efficiency in accordance with DIN EN ISO 50001:2018.

„As the largest integrated laminate plant in the world, it is an important task for us to use all possibilities to not only produce efficiently but also sustainably and to save energy. The certifications for our sustainable energy management are proof of the success of the efforts of all colleagues.“

– Rainer Hück, Head of Energy Management at the CLASSEN Group

GREEN LIVING

„The basis of the Toyota Production System is the total elimination of waste.“

– Taiichi Ohno

Less is more for all. For our planet, for our future. We at CLASSEN learned from the best. Like from Toyota manager Taiichi Ohno. He invented the famous Toyota Production System and stands for Just-in-Time and Lean Management.

With SENSE this is the very first time we apply this principle to the production of sustainable laminate flooring. We call this new revolutionary core LEAN CORE. A thickness of 8 millimetres is enough: We maximise the reduction of waste and the reduction on formaldehyde, we precisely determine the raw materials needed, without compromising the quality.

Just enough, not too much

SENSE is 8 millimeters thick and not 10 or 12 millimeters. Think about it: If all existing 12 millimeters laminate products in the world would change to 8 millimeters, you would save forest area in the size of 9.200 km². That is as big as Cyprus!

All you need is 8

SENSE with 8 millimetres has so many more benefits for you: Less drum sound, better acoustics, better sound transmissions, ideal renovation thickness.

Benefits for you, benefits for all

Weight of 20 m² laminate:
SENSE 136 kg
laminate with 12 millimeters 208 kg

This means: Less Weight and less carrying for you, more space in your car, reduced unwrapping and less packaging waste. This means less traffic and less CO₂ emissions in global transportation of SENSE.
